Stakeholder Meeting – October 18, 2016.....	2

Purpose

The purpose of this document is to capture all the minutes of meeting.

Stakeholder Meeting – October 18, 2016

Date: 18th October, 2016

Agenda: To validate the low fidelity prototype with the stakeholder

Attendees: Dr. Sivakumar, Team 3

Insights from the meeting:

- Changes to users' home page must be made to show appropriate error messages to new users of the company.
- Different entities and their associations with each other must be displayed properly for every user according to their role. For example, a developer must be able to view the business requirements, features, etc. and work with them respectively.
- A user would want to link the artifacts after he finishes creating or editing them. Thus, navigation option from 'Manage Instances' screen to 'Modify links' screen must be provided.
- The tool must display the existing instances and links in the project and no pop-up messages are needed to display any absence of instances.
- The user would want to view the instances related to one particular instance. For example, a requirement engineer might want to view instances related to a particular use case. Thus, appropriate changes must be made to view the full linkage or hierarchy behind that link.
- Any display or request of IDs to the users is not encouraged. The user would not trace the instances using the ID's. Thus the prototypes must be changed accordingly.
- Exporting of the traceability is not done for security reasons.
- Usability and security are the major quality attribute concerns for subsystem 1. Performance or reliability are not the major concerns for this subsystem's scope.

Action Items:

- Refine prototype to accommodate the necessary changes
- Write raw scenarios for usability and security
